

PORTABLE CARGO LIGHT

Model PL101 Master Safety Portable Cargo Light

The PL101 Portable Cargo Light has proven itself safe and effective for over 40 years. It was originally designed to withstand the extreme environments of the Marine Industry and Naval Shipyards. Today it is also becoming a popular tool with Utility and Construction Companies as a safety task light. Its rugged nature and virtual "Shock-Proof" safety features, make it ideal for all your damp and risky work environments.

Taking Your Task Lighting to a Whole New Level !

Availability

Beck Electric Supply recently acquired Worklights Inc. and now has total control of production and inventory levels. It is our intention to always have plenty of stock available for immediate shipment from all three of our West Coast locations.

Durability

The PL101 Portable Cargo Light is almost entirely made of heavy duty synthetic materials. These materials are extremely lightweight, durable, corrosion resistant, and do not conduct electricity. The resilient white polyethylene reflector and thermoplastic resin components resist abuse from the workplace and environment. All components are easily replaceable and can be ordered directly from Beck Electric Supply. The rugged nature of the PL101 and its replaceable parts, make it an affordable alternative to far more expensive and easily damaged metallic fixtures. The PL101 is lightweight which makes it easy to carry and rig into place on the jobsite.

Safety

The PL101 Portable Cargo Light is a general purpose floodlight that meets or exceeds Underwriters Laboratories and USCG requirements for use in damp, corrosive areas **without grounding**. The synthetic lamp holder, drip shield and shade are non-conductive and insulate the user from electrical shock hazards. The translucent reflector allows increased lighting above and around work areas for additional protection from accidents and injuries.
